

TERMET I-1m

The Termet I-1m module is designed to operate a three- or four-way mixing valve with the option of connecting an additional valve pump. This controller is equipped with a weather control function and a weekly program. Correct operation of the module when using the Termet I-3 Plus main controller or a room regulator with RS communication.

Functions performed by Termet I-1m:

- smooth control of a three- or four-way valve
- control of pump operation
- correct cooperation with I-3Plus zone manager or with any other regulator with RS communication

Controller includes:

- boiler temperature sensor
- valve temperature sensor
- return temperature sensor
- outside sensor
