

Comfort System Radiator Valve

The electronic radiator valve for the Comfort System carries out the flow control of the heating medium, depending on the heat demand. Its advantages are among others:

- maintaining the radio-controlled radiator temperature,
- valve opening adjustment based on the set weekly program,
- The set includes a reduction insert, which enables mounting the valve to the most popular insert on the market - M30 x 1.5.

Comfort system and its elements are dedicated for boilers **EcoCondens Gold Plus**, **EcoCondens Integra II Plus**, **EcoCondens Solid Plus**, and non-condensing boiler line **ELEGANCE** which are equipped with LIN interface.
